

Annex 1. Management Criteria for Substances of Environmental Concern (Automobile Products)

1. Substances subject to management and management classifications

We have adopted GADSL for our Management Criteria for Substances of Environmental Concern (Automobile Products). The management classifications and definitions for "prohibited substances" and "declarable substances" are shown in Table 1.

[Precautions for use]

The specific chemical substances within GADSL only enumerate some of the chemical substances that fall under their class of chemical substances. It does not regulate every chemical substance that falls under said class of chemical substances.

The Japanese translation has been included for reference purposes, but there are some substances which do not have official Japanese names.

The latest information on GADSL must be obtained and confirmed from the following website.

Table 1. Stanley's management classifications and definitions

The reported substances contained within vehicle materials and parts have been indicated as either "P" or "D" via the following definitions.

Classification	Definition	Target substances	Response
Prohibited	Substances prohibited from inclusion in the products, parts, materials, and secondary materials used at Stanley Electric	Substances that fall under Category P and those that fall under P of Category D/P of the substances of environmental concern stipulated by GADSL	Promptly prohibit.
		Four substances stipulated in the European End of Life Vehicles (ELV) Directive (lead, mercury, hexavalent chromium, and cadmium)	Prohibit all except for exempt parts stipulated in the European ELV Directive.
Declarable	Substances that must be reported to the company when they are used in the products, parts, materials, and secondary materials used at Stanley Electric	Substances that fall under Category D and those that fall under D of Category D/P of the substances of environmental concern stipulated by GADSL	The supplier must promptly report to Stanley.

[Explanation of the categories]

P (Prohibited): Substances that are banned or must not be included owing to legal regulations.

D (Declarable): Substances that must be reported when they are included.

D/P: Classified as either P or D depending on the purpose of use or the requirements of the customer.

80	PFOA and its salts, Perfluorooctanoic acids C8F15O2X (X = H, NH4, and Metal salts), all members		D/P	In Canada PFOAs have been declared CEPA Toxic and the government has proposed a ban on the use, manufacture, release, and import of PFOAs. A regulation is expected in 2014/2015. In January 2008, the EPA created a Voluntary Stewardship Program to reduce facility emissions and product content of PFOA, its higher homologues, and related chemicals including precursors on a global basis by 95 percent no later than year-end 2010, and to work toward eliminating emissions and product content of these materials by 2015. Norway has recently issued a regulation for PFOA in consumer products and several US states (New Jersey, Minnesota) have issued drinking water guidelines for PFOA. USEPA has also established drinking water limits in the Parkersburg, WVA vicinity. The EU has issued a directive on PFOS and has PFOA under review.		0.1% by mass in components made from fluoropolymers. PFOA is primarily used in the manufacture of fluoropolymers as a polymerization aid. It is not expected to be present at greater than trace levels in the final components made from fluoropolymers	Fluoropolymers are used to make automotive components, including fuel hoses, gaskets, wire insulations, bearings. PFOA is used as a polymerization aid and it is not expected to be present at greater than trace levels in the components made from fluoropolymers	Mark paste, such as raw materials and impurities, oil, grease, such as fabrics, carpets, such as semiconductors, film, etc.
